

A short report for the Wrangle and Analyze Data project from [Udacity](https://www.udacity.com/) (<https://www.udacity.com/>)

The task of the project was to practice data gathering, cleaning, and analysis using the data produced by Twitter account [WeRateDogs](https://en.wikipedia.org/wiki/WeRateDogs) (<https://en.wikipedia.org/wiki/WeRateDogs>). This account rates funny pictures with dogs and makes a humorous comment about it.

There are expected findings like the one that people retweet the pictures that they like and tend to "like" often than retweet. The study shows that for the WeRateDogs 'more often' means 3-5 times more. The most amount of tweets has a little number of retweets and "likes", while some of them go viral and get 100 times more retweets and "likes".

The unclassified tweets distribution has two peaks, which indicates that there is a group of images, which are much more popular than the rest.

A funny finding is that WeRateDogs rarely uses its own classification of dog "stages": pupper , doggo , puppo and floofer . The most number of pictures (1963) is not classified. The ratio of the number of pupper 's, doggo 's, puppo 's and floofer 's to each other is approximately 3. There are 3 times more pupper 's than doggo 's, and three times more doggo 's than puppo 's. The dog 'stage' floofer appeared only 8 times, which is only 0.4% from the total number of analyzed tweets.

A neural network used by Udacity sometimes fails to recognize a dog, why an eye sees it, like [here](https://pbs.twimg.com/media/DBW35ZsVoAEWZUU.jpg) (<https://pbs.twimg.com/media/DBW35ZsVoAEWZUU.jpg>).

The rating given by the account, the length of the description text, day of the week, etc., almost do not influence the popularity of a tweet. The pupper on average is as popular as an unclassified tweet, while doggo , puppo and floofer are more popular. It suggests that the popularity is driven by the figures themselves. If the figure is popular, then it gets the "stage" name, which does not matter, if it is pupper , and is significantly better, when it is either doggo , puppo or floofer .
